## **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Laura Moskowitz on 10/12/2006.

The application has been amended as follows: Claims 1-2 and 8-16 have been canceled.

The title has been changed to: "Liquid crystal display with photosensitive organic film having first, second and third thicknesses corresponding to transmissive, reflective and terminal regions."

The following is an examiner's statement of reasons for allowance: Regarding claims 3-7, there is no prior art of record that teaches a method of fabricating a LCD device, comprising the steps of: forming a photosensitive organic material layer on or over a transparent plate, the photosensitive organic material layer being divided into a display section and a terminal section located outside the display section, the display section including a reflection region and a contact-hole area, and the photosensitive organic material layer having a first thickness in the reflection region, a second thickness different from the first thickness in the contact-hole area, and a third

Art Unit: 2871

thickness different from the first and second thicknesses in the terminal section; exposing the photosensitive organic material layer to exposing light in such a way that the photosensitive organic material layer in the reflection region is exposed at a first exposure value according to the first thickness, the photosensitive organic material layer in the contact-hole area is exposed at a second exposure value according to the second thickness, and the photosensitive organic material layer in the terminal section is exposed at a third exposure value according to the third thickness; developing the photosensitive organic material layer exposed, thereby forming a first substrate; forming a second substrate; and coupling the first substrate and the second substrate with each other in such a way as to sandwich a liquid-crystal layer therebetween.

The prior art as cited teaches plural thicknesses corresponding to the reflective and transmissive region however fails to teach a third thickness supplied in the terminal region.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phu Vu whose telephone number is (571)-272-1562. The examiner can normally be reached on 8AM-5PM M-F.

Application/Control Number: 10/657,099

Art Unit: 2871

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Nelms can be reached on (571)-272-1787. The fax phone number for

the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
